

FAQs Modular Sign System

What is the largest profile size?

The largest profile size is 150mm. If a larger size is required, we produce over sized header panels, fabricated from 6mm aluminium sheet, bevelled to match the profile extrusions and the reverse routed to hold the locking strip.

What's the maximum profile length?

Profiles come in 3.3m lengths, theoretically a sign could be this length, practically we find that 1m is long enough and that even very long signs tend to be broken up into smaller units.

Can the signs be double sided?

Yes, the product is naturally double sided, both faces can be texted and a suspended or projecting sign is 6mm thick.

Can I reduce or increase the height of a sign?

Yes directories can be made longer or shorter by adding or taking away profiles to the back of a sign.

How do I maintain a Modular Sign System Sign?

The product needs no special maintenance, just a regular wipe down with soft cloth and mild detergent

Can the profiles be cut up into individual letter tiles?

Theoretically yes, however the best way to make temporary messages is to produce the message DTP printed onto paper and use our acrylic Wallets.

How big can I make a projecting sign?

A projecting sign with a single fixing at the top can be 150mm sq. Projecting signs up to 300mm wide will need fixing at the top and bottom

How do I work out the profiles needed to for the back of a sign?

You don't need to, we will do it for you. Simply send a drawing of what you want the front to look like, with appropriate dimensions to your distributor, we will do the rest.

Can signs be fixed to glass?

Yes, If the back of the sign will be visible, we recommend that you fit a vinyl mask, in a neutral colour like grey and cut slightly under- sized, to the other side of the glass to hide the fixings.

Can the signs be raised off the wall surface?

Yes, signs can be mounted onto an undersized backing board, cut from MDF or a material like Foamex. This gives the signs the appearance of 'floating' off the wall.

Can the tape fixed signs be removed from a wall?

Yes, with extreme caution. The VHB tape has a foam core, this can be split by a thin flexible blade or stainless steel wire. The sign can be cut off in this way and the residue removed with thinners. Workshop 2 does not accept any liability to damage to surfaces caused by the removal of signs.

Can Modular Sign System products be used for outdoors signing?

The product is suitable for external application so long as it is coated in an external grade paint. You need to let us know in advance if any of the signs are going to be positioned externally.
