

Minerva Paper Insert System

Minerva is a paper insert display system, designed with a neutral appearance to allow the graphic content to take the foreground, an ideal solution for holding temporary printed information.

Minerva is typically used in retail, hotels, leisure, office, museum, gallery, healthcare and education environments.

Construction

A protective 2mm thick clear acrylic lens sits in front of the printed media, held in position by a minimalistic extruded aluminium back frame, visibly only showing 4mm top and bottom. Minerva has a thin profile depth of less than 8mm.

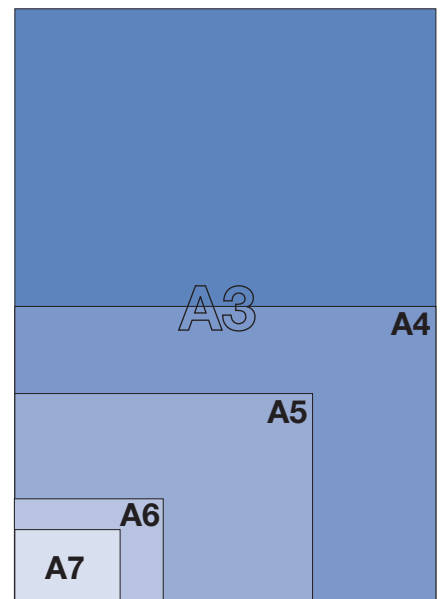

A hidden security screw locks the front lens in position to prevent tampering and allows the user to display messages with confidence.

Fixed by either VHB double sided tape or concealed screw fixing.

Standard Sizes

Minerva is available in standard 'A' sizes, A7, A6, A5, A4, and A3 in either portrait or landscape format.

Custom sizes are available within the A3 size footprint by request.

How to Refresh Minerva

Requires an Allen key spanner to release security screw.
