

FAQs FSS Footprint

Can acrylic sheet be used instead of glass?

5mm, acrylic sheet is too flexible and 'whippy', very thick acrylic sheet can be very expensive.

What's the maximum glass size I can use in a standard base?

The width of the glass can vary with the width of the base but we do not recommend the height exceed 1200mm.

Can I have a special size base or glass?

Yes, bases and glass can be cut to any size, by quotation.

What is the maximum length that the base can be?

Theoretically, bases could be up to 7m long. Operationally, a 1200mm long base remains relatively easy to handle.

Are FSS Footprint bases available in other colours?

Yes, bases can be powdercoated to any RAL colour at additional cost.

Will my courier handle the glass sheets?

Yes, our glass sheets come crated in timber framed cases. This is included in the price of the glass.

Do I have to order the poster tabs to secure the posters separately?

Each base comes with a pack of x10. Additional packs of tabs can be ordered.

How do I maintain my FSS Footprint unit?

Clean the glass with a proprietary glass cleaner and a soft cloth. Wipe the base down with a soft cloth and mild detergent if necessary.

Can FSS be used outside?

The FSS base is suitable for external use; weights are available for the aerofoil section base, for additional stability. However, the glass sheets are not designed for external use moisture can get between the sheets. A suitable digitally printed material like Foamex would have to be used. Workshop 2 cannot accept responsibility for FSS if it is used externally.
